For future healthcare innovations with AI

Bosch Health Campus (BHC) and ETH Zurich are pooling their expertise to drive forward innovative AI-based solutions for the healthcare of tomorrow. The first step towards a long-term partnership is the establishment of the BHC Fellowship Program at the ETH AI Center and the Bosch Health Campus.

Together, the two institutions aim to develop patient-centric solutions to make healthcare more efficient, personalised and accessible to all. The parallel fellowship programmes at both institutions enable an active exchange between the partners and pave the way for new synergies.

The fellowships support talented young scientists who are researching AI-based improvements for the healthcare system, for more precise medical care with a strong focus on the individual patient's needs.

The first fellow at the ETH AI Center started in November 2024, while the fellow at the Bosch Health Campus will take up his position at the beginning of 2025.
